# Approachable High Performance Computing with Open OnDemand

Joe Ryan

Systems Administrator, Institute for Cyber-Enabled Research

[ryanjos2@msu.edu](mailto:ryanjos2@msu.edu)

# Agenda

- Configuration items
- Application support
- Successes

# Configuration

- Integration with ticketing system for support
- Beta applications tagged but available for all users once approved by internal Beta tester group
- Sane defaults for each application type
- Dedicated default partition for OnDemand Jobs, but available across all cluster hardware

# Applications

- New application template system (Owen Cochell)
- Automated deployment with puppet
  - Sandbox development
  - Deployment to Beta tester group
  - Deployment to production apps with BETA tag
  - Removal of BETA tag
- Common and custom applications
  - Jupyter lab or notebook with selectable kernels
  - Disk Storage analyzer (QdirStat)
  - Ollama WebUI and LM Studio

# Successes

- Incorporated into all foundational workshops
- Highlighted as part of Quick Start documentation
- Academic course usage
- Since deployment in 2020
  - ~3200 unique users, ~120,000 jobs
  - February 2025 – 333 users, 3643 jobs
- Specialized Data Machine usage (2023-2025)
  - 82 unique users, ~1750 jobs
